

Section 10.0 Water Meters for Private Wells

Upon application by a property owner to the Public Works Department, the Town shall authorize a property owner to purchase and install a Town water meter if they are connected to the Town sewer system or are in the process of connecting to the Town sewer. Said water meter installation shall be done by the Town once the property owner configures their plumbing system in conformance with the Town of Tewksbury's specifications to accept the Town's water meter and complied with the Town's requirements for valves and backflow devices and agreed to periodic inspections of the water meter and plumbing system including valves and backflow devices and any related fees. Upon installation and inspection of a water meter for a private well and where the water is discharged into the Town sewer system, the Town shall use the water meter readings as the basis for sewer charges rather than a flat fee.
